Yaraslau Haponenka

Junior Java / Backend Developer

Minsk, Belarus
Phone: +375 33 344 20 00 | Email: gaponenkoyaa@gmail.com
LinkedIn: linkedin.com/in/yaraslau-haponenka | GitHub: github.com/gaponjk

Education

2023 – 2027: Bachelor's Degree

Belarusian State University (BSU), Faculty of Applied Mathematics and Computer Science (FAMCS)
Major: Applied Mathematics and Computer Science (Mathematician-Programmer)

Technical Skills

- **Languages: Java** (**Java Core**, **Collections Framework**, **Generics**, **Stream API**, **Concurrency / Multithreading**), **SQL**.
- **Frameworks & Libraries: Spring Framework** (**Spring Boot**, **Spring Web / MVC**, **Spring Data JPA**, **Spring Security**), **Hibernate**, **Jackson**, **Lombok**, **Log4j2 / SLF4J**.
- **Message Brokers & Infrastructure: Docker** (**Docker Compose**), **Apache Kafka**, **Kubernetes**.
- **Databases: PostgreSQL**, **SQLite**.
- **Testing & Tools: JUnit 5**, **Mockito**, **Git**, **Maven**, **Gradle**, **Spotless**.
- **Networking: TCP/IP** Stack & **OSI** Model (**HTTP/HTTPS**, **TCP**, **UDP**, **DNS**, **DHCP**), **REST API** Design, Network Traffic Analysis & Diagnostics (**Wireshark**, **nslookup**).

Projects & Practical Experience

Taco Cloud — Online Food Ordering & Delivery Web Service | [GitHub]

Tech Stack: Java, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, PostgreSQL, Apache Kafka, Docker, JUnit 5, Mockito

- Designed a multi-layered application architecture (Controller, Service, Repository) and built a **RESTful API** for menu customization, shopping cart management, and order processing with input validation (`Bean Validation`).
- Engineered a relational database schema (**PostgreSQL**) and implemented the persistence layer using **Spring Data JPA / Hibernate**, configuring complex entity relationships (`@ManyToMany`, `@OneToMany`).
- Configured user registration, authentication, and role-based access control (RBAC) for secured endpoints using **Spring Security**.

Multidimensional Data Structures & Array Processing Service | [GitHub]

Tech Stack: Java Core, Stream API, GoF Design Patterns, JUnit 5, Log4j2, Maven, Git

- Architected an extensible application adhering to **SOLID** principles and **GoF** Design Patterns (`Factory Method`, `Repository`, `Specification`, `Observer`, `Singleton`, `Strategy`).
- Implemented reactive recalculation of statistical metrics (min, max, sum, avg) upon array element modification utilizing the `Observer` pattern and an in-memory `Warehouse` storage.
- Built a flexible querying, filtering, and multi-criteria sorting mechanism using the `Specification` pattern, custom `Comparator` implementations, and **Stream API**.
- Developed fault-tolerant file parsing and data validation, designed a custom exception hierarchy, configured logging (**Log4j2**), and achieved comprehensive unit test coverage (**JUnit 5**).

Additional Education

- **JavaRush:** Intensive Hands-on Java Programming Course (Java Core, OOP, Design Patterns, Collections, Multithreading, SQL & Databases).

Languages

English: B1–B2 | **German:** B2 | **Russian:** Native
